Re: Substance Abuse Assessment for Robert Ramey

Dear Mr. Nesbitt:

I performed a basic substance abuse assessment for Mr. Ramey in reference to his pending OVI charge. This assessment included the administration of: a MAST, a DAST, a depression screening, and a clinical interview. The following are my findings and recommendations:

Substance(s) of Concern: OVI alcohol charge/ all substances screened

MAST: score = 0; no apparent or overt signs/symptoms of an alcohol use disorder

DAST: score=0; no apparent or overt signs/symptoms of a drug use disorder

DSM/Other Substance Related Concerns: no unusual or suspicious signs or symptoms evident in the clinical interview

Anxiety/Depression Screening: no symptoms of clinical concern reported or detected by written screenings or clinical interview

Clinical Interview/Summary: Mr. Ramey's written screenings revealed no indications of a substance use disorder of any kind. He reported his normal use of alcohol as 1-2 uses per week with consumption of 1-2 standard drinks (beer or wine only). He acknowledged only slight increase over this consumption amount one to two times a year (3-4 drink maximum while on vacation). Mr. Ramey denied having any previous legal charges associated with substances of any type and reported that he had no immediate or extended family members known to have a substance use problem of any kind. Mr. Ramey presented as straightforward and non-defensive in our full length interview. Ultimately, I was unable to find him meeting any criteria for a DSM-5 alcohol or other substance use disorder.

DIAGNOSIS in reference to Substances: None Found

Recommendations: I have no further professional recommendations for Mr. Ramey at this time.

Mr. Ramey has signed a release to communicate the results of this assessment to you. Feel free to contact me should you have any additional questions.

Sincerely,
Brian Davis, LISW-S, SAP
