Re: Substance Abuse Assessment for Jaime Quinata

To Whom It May Concern:

I performed a basic substance abuse assessment for Ms. Quinata in reference to her March 2013 OVI charge. This assessment included the administration of: an AUDIT, a MAST, a depression screening, and a clinical interview. The following are my findings and recommendations:

Substance(s) of Concern: alcohol

AUDIT: score=3; indicates no apparent problem alcohol use

MAST: score= 2; indicates no apparent problem alcohol use

DSM/Other Substance Related Concerns: previous alcohol-related reckless operation charge in 2011; BAC of March 2013 OVI at .05

Depression Screening: no clinically significant concerns reported

Clinical Interview/Summary: Ms. Quinata's written screenings provided no overt indication of an alcohol or substance use disorder of any kind. She reported her typical alcohol use within the past 12 months as 2-3 standard drinks on 1-2 occasions per week. She denied any signs or symptoms of preoccupation with alcohol use, loss of control of use, or use despite negative consequences to her social, relational, or occupational functioning. Ms. Quinata was articulate about her desire to moderate her alcohol use and thus, mitigate any future problems. I believe Mr. Stratton would benefit from local alcohol and drug education in order to gain further awareness of problem alcohol and substance use.

DIAGNOSIS in reference to substances: V79.01 NA/Nil

Recommendations: 1) Education, recommend 9 hrs. of Ohio Health's Drug/Alcohol Awareness Series (contact 614-566-3700); 2) If another negative consequence is incurred as a result of any substance use it is recommended Ms. Quinata seek further evaluation and follow all treatment recommendations.

Ms. Quinata has signed a release to communicate the results of this assessment to you. Feel free to contact me should you have any questions about this assessment.

Sincerely,
Ryan Smith, LISW-S, SAP, LCDC-III

Ryan P. Smith
