Re: Outpatient Counseling Summary for Preston Tartt (DOB – 11/06/1987)

Dear Mr. Joslyn:

I performed a Clinical Alcohol Assessment for Mr. Tartt in reference to his July 2016 disorderly conduct charge in August 2016. Below are his original recommendations and his discharge summary..

DSM-5 DIAGNOSIS in Reference to Substances: F10.10 alcohol use disorder, mild; rule out F10.20 alcohol use disorder, moderate

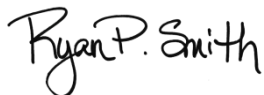

Treatment Recommendations:

- 1) Outpatient Counseling – 6-8 outpatient sessions with a professional substance abuse counselor; update recommendations or discharge as appropriate;
- 2) If another negative consequence is incurred as a result of any alcohol use, it is recommended Mr. Tartt seek an updated evaluation and begin extended outpatient substance abuse counseling as appropriate.

As of the above date, Mr. Tartt was seen for 6 follow-up outpatient counseling sessions. He was active and participatory in sessions and ongoing assessment did not reveal evidence of a moderate alcohol use disorder. Sessions focused on identifying risk factors for excessive alcohol use, coping skills to deal with distress, and exploration of prosocial valued activities. Mr. Tartt was discharged from counseling due to having completed his recommendations and the absence of clinical need for ongoing services.

If you have any questions about this report, please contact me.

Sincerely,

Ryan P. Smith MSW, LISW-S, LICDC, SAP
