Re: Substance Use Assessment for William Kraybill

Dear Mr. Fox:

I performed a basic substance abuse assessment for Mr. Kraybill in reference to his pending August 2013 OVI charge. This assessment included the administration of: a SASSI, a MAST, an AUDIT, a depression screening, and a clinical interview. The following are my findings and recommendations:

Substance(s) of Concern: alcohol

SASSI: negative screening for moderate or severe alcohol use disorder; screen further for possible mild alcohol use disorder

MAST: score = 0; indicates no apparent or overt signs/symptoms of an alcohol use disorder

AUDIT: score = 4; indicates no problematic alcohol use

DSM/Other Substance Related Concerns: possible family history of alcohol use disorder(s)

Depression Screening: no clinically significant concerns reported at this time

Clinical Interview/Summary: Mr. Kraybill's written screenings provided no indication of an alcohol use disorder of any kind. He reported his typical alcohol use as 1-3 drinks (beer) on 1-2 nights per week. Mr. Kraybill also acknowledged exceptions to this norm on approximately 4 occasions per year with a drink range of 4-5 drinks (weddings, special occasions) to 6-7 drinks (vacation) but denied instances of memory impairment, interpersonal issues resulting from use, or physiological symptoms of alcohol. After careful interviewing, I was unable to find Mr. Kraybill meeting criteria for a DSM 5 alcohol use disorder or further symptoms of clinical concern.

DIAGNOSIS in reference to Substances: None

Recommendations: I have no further professional recommendations for Mr. Kraybill at this time.

Mr. Kraybill has signed a release to communicate the results of this assessment to you. Feel free to contact me should you have any additional questions.

Sincerely,
Jessica Schoenberger, MSW, LSW, CDCA
