Re: Clinical Alcohol Assessment for Anatoly Mironenko

Dear Ms. Roberts:

I performed a Clinical Alcohol Assessment for Mr. Mironenko in reference to his pending OVI charge. This assessment included the administration of: a Michigan Alcohol Screening Test (MAST), an Alcohol Use Disorder Identification Test (AUDIT), an anxiety/depression screening, and a 50 minute face-to-face videoconferenced clinical interview. The following are my findings and recommendations:

MAST: *negative result*, score =2; no direct or indirect indication of problem alcohol use

AUDIT: *negative result*, score = 4; scores above 8 indicate hazardous use, above 13 indicates moderate to severe disorder present

DSM/Other Substance Related Concerns: denies subtle indicators of problem alcohol use including mild hangovers, mild memory loss after use, repeat use to relieve emotional or work stress, previous legal consequences, previous treatment, conflict with significant others during or shortly after use of alcohol, guilt or regret associated with use

Anxiety/Depression Screening: no clinically significant concerns reported

Substance Related Legal History Reported: denies any previous history of alcohol or substance related arrests/legal charges

Clinical Interview/Summary: Mr. Mironenko's written screenings provided no indication of an alcohol use disorder. He reported his normal use of alcohol as 2-3 drinks on one occasion per week (or less). He also acknowledged use of up to 4 drinks on rare occasions (weddings, birthdays, etc.). We discussed Mr. Anatoly's impaired driving charge (.14 BAC) at length but I was unable to find his presentation indicative of someone experiencing DSM 5 alcohol use disorder symptoms (2 symptom criteria necessary at a minimum). Further, he appeared to be both articulate and motivated to avoid any future impaired operation of a vehicle.

DSM 5 DIAGNOSIS in reference to substances: V 70.91 (none found)

Treatment Recommendations:

I have no additional professional recommendations for Mr. Anatoly at this time. If he incurs any additional legal charges or experiences negative consequences as a result of any alcohol use, it is recommended that he obtain additional assessment and follow all professional recommendations.

Thank you for the opportunity to assist Mr. Anatoly in this important matter. If you have any additional questions about his condition, please request a signed release of information and I will be glad to assist further.

Sincerely,

Brian Davis, LISW-S, SAP
cc: Anatoly Mironenko

Prohibition Against Re-Disclosure: This information has been disclosed to you from records protected by Federal Confidentiality rules. The Federal rules prohibit you from making any further disclosure of this information unless further disclosure is expressly permitted by the written consent of the person to whom it pertains or as otherwise permitted by 42 C.F.R Part 2. A general authorization for the release of medical or other information is not sufficient for this purpose. The Federal rules restrict any use of information to criminally investigate or prosecute any alcohol or drug abuse client. Drug abuse patient records are also protected under the Health Insurance Portability and Accountability Act of 1996 ("HIPAA"), 45 C.R.R parts 160 & 165. (These conditions apply to every page disclosed and a copy of this authorization will accompany every disclosure.)

Diagnostic Conclusions / Limitations: Directions Counseling Group provides Clinical Alcohol Assessments based on objective and standardized screenings and interviewing methods as well as self-reported information. Clinical conclusions are made to the best of the professional's ability with data on hand at the time of the assessment. Expanded assessments which involve additional background research, collateral information and third party verification can be provided as an additional service upon request.
