Gardnerville, NV 89410-5571

**Re: Clinical Alcohol Assessment for Yevgeny Aleksandrovich (DOB – 09/14/1985)**

Dear Mr. Lopez:

I performed a Clinical Alcohol Assessment for Mr. Aleksandrovich in reference to his disorderly conduct charge in Douglas County, Nevada. This assessment included a 45-minute clinical interview by telephone, and the administration of:

- A Michigan Alcohol Screening Test (MAST)
- An Alcohol Use Disorder Identification Test (AUDIT)
- A general anxiety/depression screening

The following items provide a summary of the screening results, my diagnostic opinion and professional recommendations:

**MAST:** score = 0 / *NEGATIVE SCREEN*; no direct or indirect indication of problem alcohol use (screen relative to lifetime use of alcohol)

**AUDIT:** score = 0 / *NEGATIVE SCREEN*; scores of 8 or more indicate potential *hazardous use*, whereas scores of 15 or more in men indicate a *moderate to severe* disorder may be (screen relative to use of alcohol within the past 24 months)

**Alcohol Use Risk Factors:**

- ☐ legal history – denies previous history
- ☐ severity of incident – NA
- ☐ anxiety/depression/mental health – NA
- ☒ general health issues – currently recovering from mountain bike accident (non-alcohol related); sustained a severe concussion at this time
- ☐ exposure to trauma – none reported outside of 2014 accident mentioned previously
- ☐ regular use of liquor – NA
- ☐ other substance use – NA

- ☐ contraindicated prescription use – NA
- ☐ family history – none reported
- ☐ prior treatment history – NA
- ☐ negative peer influence – NA
- ☐ at-risk work environment – NA
- ☐ current stress (relational, work, etc.) – NA

Summary - 1 of 13 concerns, no concern to be mitigated through further intervention

**Clinical Interview/Summary:** Mr. Aleksandrovich's written screenings provided no indication of an alcohol use disorder at any level (mild, moderate or severe). He reported his last use of alcohol before his disorderly conduct to be 6-12 months prior to his biking accident in 2014. Prior to this, his regular use of alcohol was 1-2 beers on a less than monthly basis ("maybe 6 occasions in a year"). He reported no difference in the amount consumed if he was attending a special event or celebration. Mr. Aleksandrovich and I discussed his legal incident and general use of alcohol at length. I did not find Mr. Aleksandrovich's testimony to be suspect of minimization as he cited good reason (focus on physical recovery, active lifestyle) for not drinking in excess.

**DSM-5 DIAGNOSIS in Reference to Substances:** Z03.89 (suspected substance use condition not found)

**Treatment Recommendations:** Having found no identifiable risks and no basis for a DSM-5 alcohol use disorder, I have no further recommendations for Mr. Aleksandrovich at this time.

If you or the court possess additional information about Mr. Aleksandrovich's use of alcohol that might impact the outcome of this assessment, I would be happy to review it and consider appropriate modifications or amendments to the present report.

Thank you for the opportunity to assist the court, Mr. Aleksandrovich, and yourself in this important matter.

Sincerely,

Trevor C. Davis, CDCA  
Cert.# 150427

**Prohibition Against Re-Disclosure:** This information has been disclosed to you from records protected by Federal Confidentiality rules. The Federal rules prohibit you from making any further disclosure of this information unless further disclosure is expressly permitted by the written consent of the person to whom it pertains or as otherwise permitted by 42 C.F.R Part 2. A general authorization for the release of medical or other information is not sufficient for this purpose. The Federal rules restrict any use of information to criminally investigate or prosecute any alcohol or drug abuse client. Drug abuse patient records are also protected under the Health Insurance Portability and Accountability Act of 1996 ("HIPAA"), 45 C.R.R parts 160 & 165. (These conditions apply to every page disclosed and a copy of this authorization will accompany every disclosure.)

**Diagnostic Conclusions / Limitations:** Directions Counseling Group provides Clinical Alcohol Assessments based on objective and standardized screenings and interviewing methods as well as self-reported information. Clinical conclusions are made to the best of the professional's ability with data on hand at the time of the assessment. Expanded assessments which involve additional background research, collateral information and third party verification can be provided as an additional service upon request.
