Re: Substance Abuse Assessment for John O'Bryan

To Whom It May Concern:

I performed a basic substance abuse assessment for Mr. O'Bryan in reference to his pending OVI charge on 3/2013. This assessment included the administration of: a MAST, an AUDIT, a depression screening, and a clinical interview. The following are my findings and recommendations:

Substance(s) of Concern: alcohol

MAST: score = 1; indicates no apparent problem with alcohol use

AUDIT: score=4; indicates no apparent problem alcohol use

DSM/Other Substance Related Concerns: Prior OVI (2001), one reported instance of drinking more than intended

Depression Screening: no clinically significant concerns reported

Clinical Interview/Summary: Mr. O'Bryan's written screenings provided no indication of an alcohol use disorder. He reported his typical use of alcohol as "a couple of times per week" with a drink range of 1-3 drinks and denied exceeding this amount during the week. Mr. O'Bryan acknowledged exceptions to his typical drinking on two occasions per year with a drink range of 5-6 drinks. He also denied any symptoms of alcohol use indicative of an alcohol use disorder (memory impairment, interpersonal problems, tolerance, and/or withdrawal, etc.) over the past 12 months. After carefully evaluating his alcohol use in the clinical interview and reviewing his written screenings, I was unable to find him meeting any criteria for a DSM-5 alcohol use disorder. My recommendations below support Indiana's requirements and should aid Mr. O'Bryan in decreasing the likelihood of problem alcohol use in the future.

DIAGNOSIS in reference to substances: None Found

Recommendations: 1) Mr. O'Bryan should continue to fulfill the state of Indiana's requirements; this includes completion of the "After the Crime" 6 month series, and the Victims Impact Panel; 2) If another negative consequence is incurred as a result of any substance use it is recommended Mr. O'Bryan seek further evaluation and follow all treatment recommendations.

Sincerely,
Jessica Schoenberger, MSW, LSW, CDCA
