Hannah Fraley  
126 E Waterloo St.  
Canal Winchester, OH 43110

**Re: Substance Abuse Assessment for Hannah Fraley**

To Whom It May Concern:

I performed a basic substance abuse assessment for Ms. Fraley in reference to her pending OVI charge. This assessment included the administration of: a MAST, an AUDIT, a depression screening, and a clinical interview. The following are my findings and recommendations:

**Substance(s) of Concern:** alcohol

**MAST:** score= 5; indicates problem alcohol use

**AUDIT:** score=13; indicates moderate to severe alcohol use

**DSM/Other Substance Related Concerns:** prior underage drinking and driving charge (2011), tolerance, much time spent using alcohol, instances of memory impairment, alcohol use beyond intention, family history of problem alcohol use (great uncle)

**Depression Screening:** no clinically significant concerns reported

**Clinical Interview/Summary:** Ms. Fraley's written screenings provided indication of an alcohol use disorder. She reported her typical alcohol use as 5-10 drinks per occasion which includes a preference for liquor drinks. Ms. Fraley is currently wearing a SCRAM monitor and reports she has been successfully abstaining from alcohol use. However, Mr. Fraley's alcohol use displays a hazardous pattern (instances of memory impairment, alcohol use beyond intention, tolerance, continued increased use) which indicates a *DSM-5 moderate alcohol use disorder*. Below are my recommendations to assist Ms. Fraley in obtaining awareness about high risk and negative consequences resulting from underage and hazardous alcohol use. Ultimately, this should help Ms. Fraley avoid problem alcohol use after discontinuing her use of SCRAM and when she will need strong internal motivation to do so.

**DIAGNOSIS in reference to substances:** DSM-5: 303.90 (F10.20) Moderate Alcohol Use Disorder

**Recommendations:** 1) Counseling, recommend 7-10 sessions with a professional substance abuse counselor; update recommendations at session seven; 2) Monitoring, because of Ms. Fraley's age and symptoms of use, I am recommending 6 months of monitoring with same counselor after initial counseling completed, meeting frequency at discretion of counselor; 3) If another negative consequence is incurred as a result of any alcohol use OR if motivation levels decrease, Ms. Fraley she will be referred to a higher level of care, such as Intensive Outpatient Program (IOP).

Sincerely,  
Jessica Schoenberger, MSW, LSW, CDCA
