Re: Clinical Alcohol Assessment for Cristopher Wise

Dear Mr. Nesbitt:

I performed a Clinical Alcohol Assessment for Mr. Wise in reference to his pending DUI charge. This assessment included the administration of: a Substance Abuse Subtle Screening Inventory (SASSI-3), a Michigan Alcohol Screening Test (MAST), an Alcohol Use Disorder Identification Test (AUDIT), an anxiety/depression screening, and a 50 minute face-to-face clinical interview. The following are my findings and recommendations:

SASSI-3: *negative screening*; no scores indicative of an alcohol use disorder

MAST: *negative screening*; score = 0; no direct or indirect indication of problem alcohol use

AUDIT: *negative screening*; score = 3; scores above 8 indicate hazardous use, above 13 indicate moderate to severe disorder present

DSM/Other Substance Related Concerns: denied subtle indicators of problem alcohol use including recurring mild hangovers, mild memory loss after use, repeat use to relieve emotional or work stress, previous treatment, conflict with significant others during or shortly after use of alcohol, guilt or regret associated with use; also denied any family history of alcohol use problems

Anxiety/Depression Screening: no clinically significant concerns reported

Substance Related Legal History Reported: October 2012 high test OVI (Halloween)

Clinical Interview/Summary: Mr. Wise's written screenings provided no indication of an alcohol use disorder. He reported his normal use of alcohol as 2-3 drinks on about 4 occasions per month. He also acknowledged infrequent use of 3-5 drinks on special occasions (weddings, birthdays, etc.). We discussed Mr. Wise's two DUI charges at length. While I was unable to find indications of any DSM-5 alcohol use disorder I noted, and he agreed, that his history of two alcohol related charges warranted some proactive and preventative measures in terms of basic alcohol education.

DSM 5 DIAGNOSIS in reference to substances: V71.09 (none found)

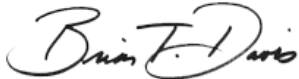

Treatment Recommendations:

- 1) Education, recommend 9 hrs. of Ohio Health's Drug/Alcohol Awareness Series (Riverside Methodist Hospital, contact 614-566-3700);

- 2) If another negative consequence is incurred as a result of any alcohol use it is recommended Mr. Wise seek additional assessment and follow all treatment recommendations.

Mr. Wise has signed a release to communicate the results of this assessment to you. Feel free to contact me should you have any additional questions about this important matter.

Sincerely,

Brian Davis, LISW-S, SAP
cc: Cristopher Wise

Prohibition Against Re-Disclosure: This information has been disclosed to you from records protected by Federal Confidentiality rules. The Federal rules prohibit you from making any further disclosure of this information unless further disclosure is expressly permitted by the written consent of the person to whom it pertains or as otherwise permitted by 42 C.F.R Part 2. A general authorization for the release of medical or other information is not sufficient for this purpose. The Federal rules restrict any use of information to criminally investigate or prosecute any alcohol or drug abuse client. Drug abuse patient records are also protected under the Health Insurance Portability and Accountability Act of 1996 ("HIPAA"), 45 C.R.R parts 160 & 165. (These conditions apply to every page disclosed and a copy of this authorization will accompany every disclosure.)

Diagnostic Conclusions / Limitations: Directions Counseling Group provides Clinical Alcohol Assessments based on objective and standardized screenings and interviewing methods as well as self-reported information. Clinical conclusions are made to the best of the professional's ability with data on hand at the time of the assessment. Expanded assessments which involve additional background research, collateral information and third party verification can be provided as an additional service upon request.
